

Product Name: **SHELL TIRE REPAIR 400mL**  
Code: **CRX434**

Supplier: Kemetyl Polska, Sp. z o.o.,  
Al. Jerozolimskie 146, 02-305 Warsaw, Poland  
Phone no. +48 22 822 53 90

### 1. Composition / information on ingredients:

Shell Tire Repair is a highly efficient and simple-to-use damaged tire sealant.

### 2. Application

Shell Tire Repair is used to seal tread damages in all types of tires and may also be used prophylactically when putting on new tires (in motorcycles and other engine vehicles). The product pumps and seals a damaged tire without the need to remove the wheel and makes it possible to get the vehicle to a service station without the need to haul it. Can be used in passenger cars with tubeless tires.

### 3. How to use

Locate and remove the element responsible for tire puncture. Shake can before use, screw on the valve adapter and pressurize the tire with the can. Rotate the tire to ensure uniform distribution of the sealant and pump the tire to its working pressure. Make sure to inform the service station that a sealant spray has been used.

Maximum speed after using the tire sealant: 45 km/h

The tire should be repaired as soon as possible. Important: Solvents contained in the product may damage the tire pressure monitoring system (TPMS).

### 4. Properties:

Contains ketones, chlorinated rubber, and hydrocarbon propellants. May cause damage to lacquers and plastics. Application recommended on two-component lacquer coatings only. Recommended application temperature: 15°C to 25°C

Form:	aerosol
Flash point:	-41°C
Density at 20°C	0,79 g/cm <sup>3</sup>

## 5. Storage

No special requirements for storage. Protect from heat and direct sunlight.

Issue date: 07.11.2019
